

On Saturday, November 29th, please join us for an informal discussion panel bringing together Scientists, Technologists and Designers to weigh in about the current and future influence of each of these disciplines on one another. The Mother-Child Health International Research Network (<http://mother-child.org>), The World Association of Young Scientists (<http://ways.org>) and the Canadian Centre for Architecture (CCA - <http://www.cca.qc.ca>) invite you to a public conversation on collaboration between three critically important – and increasingly interdependent - fields of knowledge.

This session will be structured around a series of questions posed to our guest panelists, followed by a discussion and open exchange with the audience. Held in the Shaughnessy House of the Canadian Centre for Architecture, this event extends the CCA's exploration of online technologies in the development and sharing of knowledge. Some of the challenges we'll be contemplating:

- How do your environments – computing, physical and other – affect your design philosophies, the technology you use, or the way you conduct your research? What are we doing well, and what can we do better?
- How much of your collaboration happens online instead of face-to-face? How do your virtual and physical surroundings influence the way you interact with others?
- Is it as easy to transfer knowledge online as it is in person? If not, how can we build virtual spaces where exchanges happen as seamlessly as they do face-to-face?

Saturday November 29th, 2008, from 2:30pm until 4:00pm

Canadian Centre for Architecture: 1920 rue Baile, Montréal, Québec – Shaughnessy House.

Refreshments will be provided.

Email [steven@ways.org](mailto:steven@ways.org) or call (514) 995 0523 for more information about the event.
